[Fixed] iPhone stuck on install now screen

Why is my iPhone stuck on the restore screen. iPhone 7 plus stuck on restore screen. What to do when iPhone is stuck on restore screen. iPhone 7 stuck on connect to iTunes screen and won't restore.

What will the next iPhone look like when it is released in September after its first major redesign in two years? In a new concept, Sam Beckett, an independent concept designer, imagines a next-gen iPhone Air with a 4.7-inch, 1080p high-definition display with a 468ppi resolution, up from a 4-inch display with a 326ppi resolution. The redesign also brings the iPhone's display more in line with both the size and clarity of competing smartphones like the Samsung Galaxy S5. From a design standpoint, Beckett's concept seems plausible. Keeping the design language of the iOS devices that have preceded it, the iPhone Air concept would be 8% larger than the iPhone 5s, while giving customers a 17% bigger screen. A bigger screen means more drain on the battery, but thanks to Sharp IGZO technology, this new iPhone Air would be thinner and lighter than the current iPhone while retaining the same battery life, even if the screen has more pixels to light up. Beckett isn't alone in thinking Apple will move to a bigger form factor with the next iPhone. Analysts are also predicting the switch. Yet migrating to a bigger display like this would mark a major change in the way Apple updates its products. When Apple introduced the iPad Mini with Retina Display, the company took pains to make sure that both devices had the same resolution, even though the Mini has a 33% smaller screen than the iPad Air. The reason the company did this was so that developers didn't have to update their apps to support the Mini: An app running on an iPad mini uses the exact same graphical assets as one running on the iPad Air. In Beckett's iPhone Air concept, though, the 4.7-inch iPhone Air would feature a completely different resolution than current iPhones. Developers would need to update their apps to support the device. Even then, it's not clear how Apple would maintain backwards compatibility with existing apps, because of the difference in pixel densities: When Apple changed the number of pixels per inch in previous devices, the company always made sure that it was quadruple the previous resolution, making it easier for developers to support both. A 1080p iPhone Air, though, has 1.9 times as many pixels as the current iPhone 5s. It's an oddball multiplier that Apple would need to develop a new upscaling system to support, if it wanted to make older apps backwards compatible. That's not to say, of course, that Apple won't do just that. Although the best way to predict what Apple will do in the future is to look at what the company has done in the past, obviously not everything the company does will have precedent: Look at how Apple lengthened the screen of the iPhone 5 to 4 inches, for example. Asia is the next frontier in the smartphone wars and Asian consumers love big phones. Which brings us to the question: Why a bigger iPhone to begin with? Beckett doesn't elaborate on why he thinks a 4.7-inch iPhone Air is the way to go, but it's easy to read between the lines. The iPhone's current 4-inch size may sell well in the United States and Europe, but Asia is the next frontier in the smartphone wars, and Asian consumers love big phones, especially in China, which represents Apple's biggest opportunity when it comes to growing its smartphone business. What isn't seen in Beckett's iPhone Air concept, then, is a smaller 4-inch iPhone 6, in pretty much the same size and form factor as we've had for the last two years. A smidge thinner and a smidge lighter, perhaps, but specifically tailored to the preferences of the United States and Europe, whereas the iPhone 7 would be Apple's Trojan horse into China. And lo and behold, that's just what analysts are predicting: two iPhones—not one—to rule them all. Read more about Beckett's iPhone Air concept here. It looks like Apple is going big: huge iPhones, huge iPads. And now this week, we learned that Apple is working on new ways for "freemium" app makers to eke out revenue, one of which falls in line with its strategy to go bigger everything: full-screen banner ads. A new document provided to developers about changes to its iAd platform indicates that full-screen interstitial ads and pre-roll video ads are coming to the iPhone's apps, according to Apple Insider. The document (PDF) suggests that the full-screen banners can be used as a transitional screen between two sections of the application; like, say, when you're jumping from the map screen of Two Dots to the actual gameplay. Meanwhile, the new pre-roll video ads can play for either 15-, 30-, or 60-second increments. (Yes, 60 seconds.) Apple is encouraging developers to experiment with its new ad formats. "Implement pre-roll video ads into your app," writes Apple, "and earn much higher CPAs." Oh good. By Steve Gregory Under normal conditions, a computer screen's resolution is large enough for items displayed to cover the entire surface area of the screen. However, if a system change or glitch causes the resolution to change, it can ruin the viewing experience. For example, a lower screen resolution will cause fewer items to fit on the screen, reducing the amount of information you can see without constantly scrolling across the screen. Fortunately, you can restore the screen resolution by accessing the Appearance and Personalization feature in Windows. Click "Start" then "Control Panel," and select "Appearance and Personalization" from the list of options. Click "Adjust screen resolution" under "Display." The "Change the appearance of your displays" page will open. Click the drop-down list next to "Resolution." A list of available resolutions will be displayed. Click the slider and drag it to select the resolution with the highest setting, or the setting that best suits your needs. Click the "Apply" button. The system will change the screen resolution. A dialog window will open asking if you want to keep the display settings. Click the "Keep" button to save the new screen resolution. The iPhone 12 launched a revamped design featuring flat sides reminiscent of the iPhone 4 and 5 (and the new iPad Pro). It also sports slimmer bezels, a narrower notch, 5G support for the first time, and the powerful A14 Bionic processor. But even if it features Corning's new Ceramic Shield glass, its crisp display isn't immune to damage. That's why we've rounded up the best iPhone 12 screen protectors available. Regardless of your budget, these will boost the durability and strength of your iPhone's display. L K Privacy Screen Protector You always want to repel prying eyes from your iPhone screen, and the L K Privacy Screen Protector is more than up to the task. It keeps all personal information shielded from strangers with its anti-spy, non-glare, dark protective covering. It also serves to protect your screen from bumps, drops, and other common impacts. When using this screen protector, screen brightness will be reduced, so be sure to boost the display brightness while it's installed on your phone. Spigen EZ Fit

Tempered Glass Screen Protector for iPhone 12 The main thing you want from a screen protector, and with a hardness rating of 9H, it also includes an auto-alignment kit, with the frame making it very easy to apply to your iPhone 12. Aside from being hard enough to resist scratches from a knife, it's remarkably transparent and clear, while it has been cut finely to fit the outline of the iPhone 12's screen. It also has an oleophobic coating (i.e. it's fingerprint-resistant), repelling the kinds of smudges that can make your screen look more than a little grossy and grimy. FILUV iPhone 12 Screen Protector Another tempered-glass iPhone 12 screen protector with a 9H rating, this cover from FILUV is scratch-proof, fingerprint-proof, and waterproof. It will protect the phone from minor scuffs as well as more high-impact damage, such as falls and collisions. Not only does it protect the iPhone 12's screen, but it's designed to be highly transparent and sensitive, allowing you to use your iPhone 12 just as normal. It's sold in a pack of three, is designed to provide a 1:1 fit with the iPhone 12's screen, and even has its own installation tutorial video to help you apply it. ESR Tempered-Glass Screen Protector for iPhone 12 ESR's tempered-glass iPhone 12 screen protector offers an impressive level of protection. It has a hardness rating of 9H, like many of the protectors listed. However, ESR claims the screen protector's three-layer construction system can tolerate 5 kilograms/approximately 11 pounds of force. It's incredibly resistant to impact and protects against scratches and fingerprints. This screen protector comes with an installation frame to ensure an easy, dust and bubble-free application process. It's sold in a three-pack and includes a cleaning kit as well. Floveme iPhone 12 Screen Protector The iPhone 12 screen protector by Floveme also comes in a three-pack and is the thinnest protector listed. At only 0.25mm, this protector is almost completely transparent, providing touchscreen accuracy of 99.9%. It might be paper-thin, but its 9H hardness rating means it can take quite a beating while keeping your screen protected. An oleophobic layer also prevents the presence of unsightly fingerprints. Finally, this protector comes with an installation frame, a useful, though not entirely necessary to use cleaning kit, and improved ABS glue to fit itself to the iPhone 12 screen securely. Ailun Glass Screen Protector for iPhone 12 Another ultra-thin screen protector is the iPhone 12 screen protector, which measures only 0.33mm thick. Its tempered glass has a hardness rating of 9H, so this protector also does an excellent job of preventing chips and cracks on your display. Its oleophobic and hydrophobic coatings protect the display from water damage, warding off smudges and fingerprints. The laser-cut cover is a perfect fit for the phone screen and is also equipped with 2.5D curved edges to make gripping and applying the protector an easy application process. You can buy this in a three-pack with a transparency rating of 99.99%. Editors' Recommendations
